* Pig Crop
* Intentions

INVENTORY DOWN 3 PERCENT

Inventory of all hogs and pigs on March 1, 1986, in the 10 States conducting quarterly hog surveys is estimated at 38.6 million head, 3 percent below last March 1, according to the Crop Reporting Board. This is 4 percent below March 1, 1984 and the lowest March 1 inventory since 1976.

-- Breeding inventory, at 4.99 million head, is 4 percent less than last year and 8 percent less than March 1, 1984. This is the lowest March 1 breeding herd inventory since 1973, when estimates for these comparable 10 States became available.

-- Market hog inventory, at 33.6 million head, is 2 percent below a year earlier, 3 percent below two years ago and the lowest March 1 market hog inventory since 1977.

PIG CROP

The December 1985-February 1986 pig crop was 14.9 million head, 1 percent above the corresponding period last year and 4 percent above two years ago. There were 1.94 million sows that farrowed during the quarter, a decrease of 1 percent from the comparable quarter both last year and two years ago.

Sow farrowings averaged 7.67 pigs per litter compared with 7.51 last year and 7.27 two years ago. The litter rate is the highest of record for a December-February quarter.

FARROWING INTENTIONS

Hog producers in the 10 quarterly States intend to have 2.32 million sows farrow during March-May of this year. If these intentions are realized, farrowings would total 4 percent less than the actual number for the comparable period of 1985 and 6 percent less than the 1984 quarter. Farrowing intentions for June-August are 2.18 million head, slightly below actual farrowings for the same period last year and 3 percent less than two years ago.

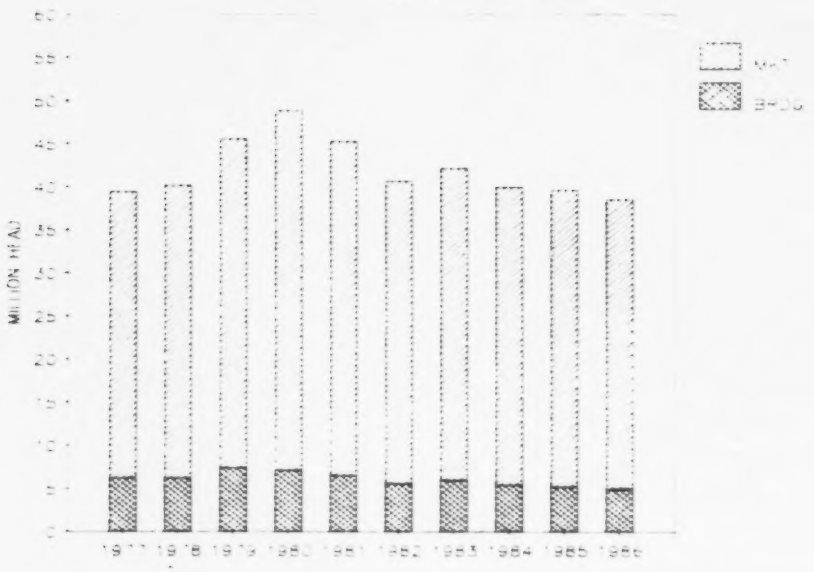
MARCH 1 HOGS AND PIGS INVENTORY
10 MAJOR PRODUCING STATES



RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the 10 States using probability surveys. Information was collected by mail, telephone, and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two and one-half percent at the 10 State level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within five percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For March-May second intentions these differences have exceeded four percent in two of the last ten years. For June-August first intentions as of March 1, these differences have exceeded five pe cent in four of the quarterly pig crops during the past ten years.

In setting the inventory estimates, the Crop Reporting Board constructed a balance sheet using estimates on births, deaths and check data on slaughter. This balance sheet provided an additional check on survey inventory estimates.

INVENTORY DOWN 7 PERCENT

Inventory of all hogs and pigs in the U.S. on June 1, 1986 is estimated at 48.8 million head, according to the Agricultural Statistics Board. This is 7 percent below a year ago and 8 percent below June 1, 1984. This is the lowest June 1 inventory since 1975.

-- Breeding inventory, at 6.39 million head, is 9 percent below last year and 14 percent below two years ago. This is the lowest June 1 breeding inventory since the establishment of June 1 U.S. inventory estimates in 1964.

-- Market hog inventory, at 42.5 million head, is 6 percent below a year ago and 7 percent below two years ago.

The 10 Quarterly States, with 38.0 million head on June 1, 1986, are down 9 percent from both last year and two years ago.

PIG CROP

The December 1985-May 1986 U.S. pig crop was 41.1 million head, 3 percent below last year and two years ago.

Sows farrowing during this 6 month period, at 5.31 million, were 5 percent less than the previous year and 7 percent below two years ago. Pigs saved per litter was a record high 7.73 and compares with 7.64 last year and 7.45 two years ago.

In the 10 Quarterly States, the December-May pig crop was 31.8 million head, 5 percent below last year and 4 percent below two years ago. The December 1985-February 1986 pig crop, at 14.9 million head, was up 1 percent from a year ago and 4 percent from two years ago. The March-May pig crop of 16.9 million head was 10 percent below last year and two years ago.

FARROWING INTENTIONS

U.S. hog producers intend to farrow 5.16 million sows during the June-November period, a decrease of 9 percent from the same period in 1985 and 12 percent below two years ago.

Intentions in the 10 Quarterly States for June-November are 4.06 million head, down 9 percent from the corresponding period last year and 11 percent below two years ago. June-August intended farrowings, at 2.02 million head, are down 8 percent from the comparable quarter in 1985, while September-November intended farrowings, at 2.04 million head, are down 10 percent from last year.

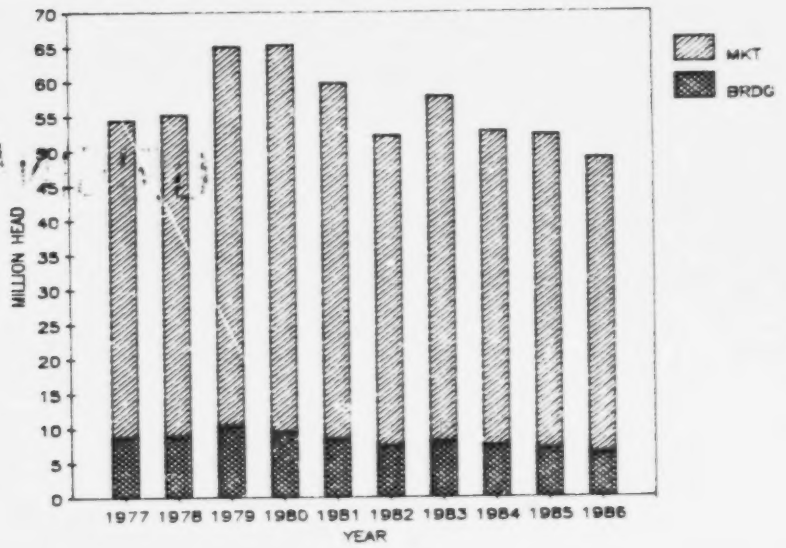
JUNE 1 HOGS AND PIGS INVENTORY

UNITED STATES



RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone, and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedure were used to survey all producers.

Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For June-August second intentions in the 10 quarterly States, these differences have exceeded three percent in two of the last ten years. For September-November first intentions in the 10 quarterly States as of June 1, these differences have exceeded six percent in four of the last ten years.

In setting the inventory estimates, the Agricultural Statistics Board constructed a U.S. balance sheet using estimates on births, deaths, and check data on slaughter, imports, and exports. This balance sheet provided an additional check on survey inventory estimates.

APPROVED:

Robert A. Thompson

ACTING SECRETARY OF AGRICULTURE

AGRICULTURAL STATISTICS BOARD:
Raymond R. Hancock, Chairperson,
L. Duane Jewell, Secretary,
Robert L. Freie, Robert W. Cole,
Robert A. Graham, George W. Hill,

AGENCY NAME CHANGE

The Statistical Reporting Service staff has been active during the past 3 years examining virtually every aspect of its work. One phase dealt with the Agency's identity within the agricultural and statistical communities. As a result of this study, the name of the Statistical Reporting Service has been changed to National Agricultural Statistics Service. This name more accurately reflects the purpose of the Agency, its broad agricultural focus, and the service aspect of its responsibility. In line with this change, the Agency's Crop Reporting Board has been renamed the Agricultural Statistics Board to better describe the scope of its output.

Requests for a subscription order form covering all available reports should be directed to Agricultural Statistics Board Publications, Room 5829-South Building, USDA, Washington, D.C. 20250 (Phone (202) 447-2021).

This report and other statistical, economic, marketing and news reports are available as soon as possible following release through USDA's EDI SERVICE. For more information, call or write: Russell Forte, (202) 447-5505, OGPA, USDA, Washington, D.C. 20250.

RELEASED: September 22, 1986
3:00 P.M. ET

ORIGIN

In this Issue:
* Inventories
* Pig Crop
* Intentions

INVENTORY DOWN 5 PERCENT

Inventory of all hogs and pigs on September 1, 1986, in the 10 States conducting quarterly hog surveys is estimated at 39.6 million head, 5 percent below last year, according to the Agricultural Statistics Board. This is 8 percent below September 1, 1984 and the lowest September 1 inventory since 1975.

-- Breeding inventory, at 4.84 million head, is 10 percent less than a year ago, and 13 percent below two years earlier. This is the lowest September 1 breeding inventory since 1973, when estimates for these comparable 10 States became available.

-- Market hog inventory, at 34.7 million head, is 5 percent below last year, 8 percent percent less than 1984 and the lowest September 1 market hog inventory since 1975.

PIG CROP

The June - August 1986 pig crop was 15.9 million head, 6 percent below last year and 8 percent below two years ago. There were 2.03 million sows that farrowed during June - August, down 7 percent from a year earlier and 10 percent less than the same period two years ago.

Sows farrowing during June - August 1986 averaged 7.79 pigs per litter compared with 7.73 last year and 7.60 during the comparable period two years ago. The 7.79 pigs is a record high and continues the trend of a gradual increase in pigs saved per litter.

FARROWING INTENTIONS

Hog producers in the 10 Quarterly States intend to farrow 2.06 million sows during September - November of this year. This is 9 percent fewer than during the comparable period in 1985, and 11 percent below 1984.

Farrowing intentions for December 1986 - February 1987 quarter are 1.83 million head, 6 percent below a year earlier and 7 percent below two years earlier.

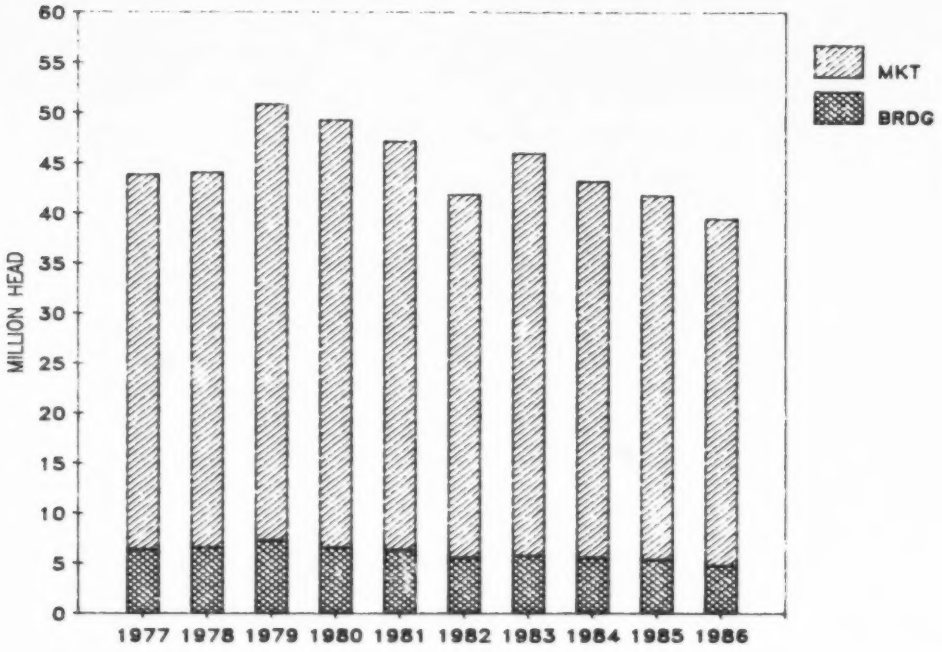
SEPTEMBER 1 HOGS AND PIGS INVENTORY

10 MAJOR PRODUCING STATES



RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the 10 States using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about 2 percent at the 10-State level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to unexpected economic and environmental conditions. For September - November second intentions these differences have exceeded six percent in three of the last ten years. For December - February first intentions as of September 1, these differences have exceeded eight percent in four of the last ten years.

In setting the inventory estimates, the Agricultural Statistics Board constructed a balance sheet using estimates on births, deaths and check data on slaughter. This balance sheet provided an additional check on survey inventory estimates.

ORIGINAL

In This Issue:

* Inventories
* Pig Crops
* Intentions
* Operations
* Inventory Values
* Revisions for 1985 and 1986

INVENTORY DOWN 3 PERCENT: U.S. inventory of all hogs and pigs is estimated at 51.0 million head on December 1, 1986, according to the Agricultural Statistics Board. This is 3 percent below a year ago, 6 percent less than December 1, 1984 and the lowest December 1 inventory since 1975.

-- Breeding hog inventory, at 6.61 million, is 3 percent below last year and 5 percent below two years ago. This is the lowest December 1 breeding inventory since breeding inventory estimates were first begun in 1963.

-- Market hog inventory, at 44.3 million, is 3 percent below a year ago and 6 percent below two years ago.

The 10 QUARTERLY STATES with 39.7 million head on December 1, 1986, are down 3 percent from a year earlier and 6 percent from December 1, 1984. These 10 States account for approximately 78 percent of the total U.S. hog and pig inventory.

1986 PIG CROP: The U.S. pig crop for 1986 totaled 82.3 million head, 4 percent below 1985 and 5 percent below the 1984 pig crop.

-- December 1985-May 1986 pig crop, estimated at 40.3 million head, is down 5 percent from both a year earlier and the comparable period in 1984.

-- June-November 1986 pig crop, estimated at 42.0 million head, is 3 percent below last year, and 5 percent below the June-November 1984 crop.

A total of 5.42 million sows farrowed during June-November 1986, 4 percent below a year earlier and 7 percent below the June-November 1984 period. The litter size during this period averaged a record high 7.74, up from the previous record of 7.67 set a year earlier and up from 7.54 for the June-November 1984 period.

In the 10 QUARTERLY STATES, the June-August 1986 pig crop totaled 15.9 million head, 6 percent below the same quarter a year earlier. For the September-November period, the pig crop of 16.7 million head is 3 percent below the same period in 1985.

FARROWING INTENTIONS: U.S. hog producers intend to have 5.34 million sows farrow during the December 1986-May 1987 period, up 2 percent from a year ago.

Intentions in the 10 QUARTERLY STATES totaled 1.87 million sows to farrow during December 1986-February 1987. This is up fractionally from actual farrowings during the same period a year earlier. The March-May 1987 intentions, at 2.21 million, are 2 percent above the March-May 1986 quarter.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about 2 percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within 4 percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording, and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to changes in economic and environmental conditions. For second intentions these differences have exceeded 5 percent in 2 of the last 10 quarterly December-February pig crops. For first intentions these differences have exceeded 6 percent in 3 of the last 10 quarterly March-May pig crops.

In setting the inventory estimates, the Agricultural Statistics Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. The balance sheet provided an additional check on survey inventory estimates.
